

Spec Products that are “level”[®] 2 Certified

“level”[®] provides customers with an open and transparent means of evaluating the environmental and social impacts of furniture products for the built environment. Level is a multi-attribute, sustainability standard that takes into account a company’s social actions, energy usage, material selection and human and ecosystem health impacts. It addresses how a product is sustainable from multiple perspectives. Level is expected to be the eco-label to look for when specifying environmental responsible contract furniture.

The following Spec products are level[®] 2 certified (to ANSI/BIFMA e3-2012):
