Accessibility Considerations: Purposeful Design For All

In this course, we dive deep into understanding what accessibility truly means, elements in the built environment that contribute to accessible design, and how much it is in your power as an interior designer to influence accessibility in the built environment.

There is no one-size-fits-all, as disabilities and needs vary in type, degree, and number. Some are temporary, others permanent. We will, however, study design from various perspectives and complete the course with a much clearer lens and defined tools to normalize accessibility for all.

IDCEC Code: CEU-121921

Subject Code: 2-1

Designation: HSW - Barrier Free

Learning Level: Basic

Course Value: 1 CEU credit

Type: In Person

Learning Objectives:

- Acquire foundational knowledge to inform design for accessibility
- Understand demographic information that demonstrates the need for accessible design
- Obtain resources to further knowledge and understanding of accessible design
- Understand how to successfully design spaces for accessibility using real-life examples
